The Parell * Pheet *

"They'll Never Miss The Little Bit I Do-!"

"Well - I guess I'll lay off today and catch up on the sleep I lost last night. That was a pretty last poker game and I didn't get to bed as early as I usually do and I need some sleep. They won't miss me at the plant today. The little bit I contribute can't amount to very much."

"Boy, oh hoy — teltat a day! Did you ever see such mushine? This is no day to go to work. I'm goin' to knock off and take a good walk for myself in the woods. The old job will keep and the guys at the plant'll never know I wasn't there."

"With the money rolling in pretty good these days I guess I can take the day off and go shopping. Gee, I haven't been up town for so long I won't know what the old place hooks like. And besides, I'm not needed at the plant. What with all those people working on my shift they'll never miss the little bit of work I do, and anyway they can get somebody else to run my machine."

There seems to be a new game that is being played by too many civilians these days and it is causing havor with the way production to a good many plants. It seems to have a high-sounding name. They call it Absenteeson. Back in school days we used to call it by its right name, "playing hookey."

The Japa and the Germans never heard of it and they aren't playing it.

Thank goodness our own boys in the armed forces aren't playing it.

Have we who are working in the mills and plants and factories of this great nation any right to play it?

Not Emphasically Not

At the top of this page are three conversations which might have been made by three different people last week or this week, or even this morning. Anyone who talks like that, even to himself or herself, just plain hasn't got his or her heart in the right place.

There is, however, one big thing about these conversations that is definitely wrong. Each one of those people said something about "they'll never miss the little bit I do." Just suppose that everybody in the plant talked that way. What would happen? Sure, each and every one of us contributes only a little bit, but if you add all these "little bits" up it makes a great big total, and it's the total that we're all interested in these days. One little bit dropped out there spoils the whole thing.

When I said that our own boys in the armed forces weren't staying away from work just to take a day off, you know that I was telling the truth. These boys who are fighting our basiles know what a grim, dirty business this war is. They know that they've got to keep at it out there on the front line until every rotten Jap and described German is put in his place. These boys of ours know that they can't take a day off just because they feel like it or because the sun is shroing. They know they've got to stay right in there every single minute and fight as hard as they can to get this war over with as soon as possible.

Is it fair to them for us to stay away from work a day here and a day there simply because we have more money than we used to have, or because we don't happen to feel like going to work?

Of course it isn't! And thank goodness everybody isn't doing it. But there are entirely too many people who are doing it.

About a week ago I met one of our employees on the street, and I stopped to talk with him. He is a man who has been with Pepperell for 27 years. He is the father of three boys, two of whom are in the Army. We get to talking about this business of people traying away from work every now and then. I was very much interested in the fact that he just couldn't understand how people can do it. His thoughts were best expressed when he said, "People in mills and factories don't realize that shey are just as important as soldiers in the Army." And there is a powerful lot of truth in what that man said. We are soldiers in the army of production, and unless we make the goods and the sheets and the shells and the tanks and the parachites, and get those goods to the men in the Army and the Navy, those men aren't going to be able to win this war,

David Dlook

Sheet

NUMBER 10

Published by Pererrett Manusacturing Company, for the enjoyment of its employees and friends BITOTPORE, MAINE, LEWISTON, MAINE, FAIL REVEL, MASS., LINDRES, GA., AND OFFICIAL ALA. Executive Officer | 60 State St., Renton, Massacouperers. General Sales Officer 40 Vignett St., New York, N. Y.

OCTOBER, 1942

COTTON IS ONE OF THE SOLDIERS? BEST FRIENDS

Lt. Col. John P. Baum of the United States Army

Julin P. Baum left his position as Assistant Manager of Pepperell's Opelika, Ala., mill back in December 1949. He was in the ROTC, and as a reserve officer he was one of the first called into the service. He entered the Army as a Capturn. In May 1911 he was made a Major, and today he is Lieutenant Colonel John P. Baum. His present task is that of Deputy Chief of the Clothing Section, Clothing and equipage Division, Office of the Quartermaster General. This important Army near has the duty of sapplying clothing and other textile materials to camps and stateons both on this continent and overseas, wherever American soldiers may be stationed.

Cotton As Important As Guns

A soldier's best friend is his rille. He is taught to The it, to trust and treasure it as his constant companion to the said treasure, it is not only his weapon for defending himbut it's the weapon he will use to kill the enemy at thery chance he can get. Every soldier respects and bis rifle with almost loving care. It stays with constantly, and in combat he sleeps right with it.

FRONT COYER.

It won't be long now! Here's a pile of sceap metal collected from roadside junkheaps for reuse by the steel mills producing war materials. Spon it will be toaded into open-hearth and other types of furnaces, mixed with a percentage of new his iron and made into steel for the war industries. Nearly 40 per cent of the secel produced comes (rom surap metals, Gooperate with your Salvage Committee - get in the scrap by saving scrap!

Liquiescel Colotel John P. Beam was formerly Assistant Massager of Pepperell's Opsiite, Alabama, mill, in this entitle be explains the Govertment's used for the fabrics that are being some on Pepperell Icoms -looks that are working at top speed in each one of Popperell's mile.

Although most soldiers aten't aware of it, the cottontextile articles that they wear and have in their kits are just as close to them as this rifle. Of nourse, the cutton doesn't protect the soldier from the enemy nor does it kill any enemy soldiers directly. It is though, just as important in many ways as his rifle. Twenty-four hours a day communestiles are duing some kind of work for the soldier, and they're doing it whether he is in a combut area, in a camp, on board ship, or even in a plane.

The subdier uses a cotton towel when he gets up in the meaning, and it not only dries him but it aids in allimportant cleanliness. In the summer his underwear is all cotton. In the winter his underwear contains a miniman of 50% conton. During the summer his uniform is (Continued on next page)

(Continued from Perceding Page) made entirely of cotton and when he's on fatigue dutythat means when he's really at work, he wears work clothes made from herringbone swill such as Pepperell makes in its Lindale mill. Of course his mosquing bar is made of cotton to protect him from disease carrying insects in the tropics. His ramicout is made from a connon base.

Special Laboratory for Textiles

Even when the soldier has got on his winter uniforms he still wears a loc of cotton, for the linings of his wooltrousers and his woolen overcoat are made of cotton. All of his tears, gun covers, water-bags, belts, bandoleers, leggings and haversarks are made completely of cotton. In the Army Ordnance Department which has charge of the manufacture of all guns and ammunition used by the troops, they have a special laboratory set up for testing nothing but the various types of conton cloth used in connection with gons and ammunition. Gun covers, machine gen ammutation belts, cartridge belts and many other cotton products are given a complete examination on highly specialized conton testing apporatus in one of the largest government arsenals,

Fabrics Developed Specially

A great many people have admired the fine cotton cloth from which the regulation khaki uniforms that the soldiers wear is made. This cloth is believed to be superior to any cotton uniform cloth that has ever been developed, for it combines strength and fine appearance, It is made from combed yarns and woven to a relatively high count. Only var dyes are used in giving it its discincrive color and of course, it is protected against shrinkage. This standard uniform cloth represents one of the major developments in the cocton-texcile industry. and it is a tribute to cooperative work on the part of the Army and the industry that the American soldier now wears one of the finest uniforms that has ever been made. In working closely with the cotton textile industry the

The wesquite belowers were by these men are a part of the regular equipment applied our forces in tropical countries. Jepparell weares many thousands of yards of this meterial for the Government. Then kalping to keep our forces in those climates from from intections treach bites that might cause the loss of many lives.

Coloring in the shadow of their tank, these members of Uncle Sale armored forces are shown wearing the rugged latigue uniforms the are common to all branches of the service. These garments are need of a tail fabric, similar to that made by Papparel for the Government.

Army has also developed types of fabrics and gamments that are entirely new to Army use. The new Army help jacket is an ideal example. It is made from a fine grade of closely woven cloth with a high breaking strength treated to be water-repellent. On maneuvers, it was discovered that the subdiers liked this jacket so much the were them under practically all conditions, and all F ports showed that they liked them better than almost and other outer garment that has been issued to them.

Futigne Suit, Most Used

Of all the uniforms worn by the soldier, the one that be's most familiar with is the herringbone well langur suit. He wears this type of garment, which is really ibt old-type coverall brought right up to date, a great part of the time, for this is his work suit. He wears it in 102.0 ing, on maneuvers, in combar. This, I understand if asside from cloth such as deat now produced by Pupper (1) in its Lindale, Georgia, mill. This is the real work a dal uniform of the soldier and from the reports that we have been getting they like not only the sixle of the cormenbut the cloth a great deal.

Army Needs Our Cooperation

The work that the cotton textile industry is doing keep soldiers supplied with the hundreds of different and ton articles they need, may not be as comantic as the P of making airplanes, but believe me, it's jast as importan-The Army needs the help of every single person in detextile industry to keep the soldiers continually supplied with the vast amount of cotton requirements that the have. Keep up the good work!

TEN WAYS TO SAVE FUEL!

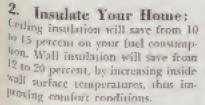

Save Up To 60% On Your Fuel Consumption By Following the Heating Suggestions Shown On This Page

Material Based on Report by American Society of Heating and Ventilating Engineers

1. Install Storm Windows and Doors:

Application of storm windows and doors will save from 20 to 25 per rent. Lightly fitting storm such enables the maintenance of higher indoor relative humidity, reduces down-draft of rold air at windows and improves comfort of the occupant.

3. Add Window and Door Weatherstripping:

Installation of weatherstripping will save from 5 to 10 per cent. Savings are greater when applied to loosefitting windows and doors continonly found in older houses, because it lessens the entitates space for cold air.

Avoid Overheating: incrage hear should be between 65 and 705 F. Install thermostatic control for the maintenance of uniform temperatures. Wear more clothing and avoid necessity of higher semi-bratures. Small children should be tops off drafty floors.

5. Lower Temperatures; Reduce temperatures at night to about 60° K, and fuel savings will tange from 5 to 10 per cent. When away for the week-end or several days, set the thermostal at about

days, we the thermostat at about 50° F, which will be enough to prevent damage from freezing.

6. Do Not Heat Unused Rooms:

Turn off heat in garage for the duration, also in sun-room if it can be shut off from rest of house. Keep duors sightly rlosed to autic and other unused rooms. Seal fireplace openings or close damper rightly. Turn off hear in bedrooms when windows are open.

7. Insulate Hot Water Heater:

Apply insulation to the storage hot water tank to conserve heat. Be sure all faucers are in good condition because a leaky hot water faucer wastes both water and the fuel that is needed so heat it.

8. Improve Radiator Efficiency:

Remove all dirt and keep heavy drapes, etc. away from radiators. Bronze or aluminum finish Jessens maximum efficiency by as much as 10 per cent. Ordinary oil paints are better. Put a shiny reflector behind each radiator to reflect heat back into the room.

9. Check Furnace Combustion Efficiency:

Removal of soot from inside surfaces of furnace or boiler will save about 5 per cent. Check chimney draft, stack temperature and percentage of carbon dioxide in flue gas, with scientific instruments.

10. Recondition Heating Plant:

Every bearing plant should be surveyed and tested by a competent beating engineer or contractor to determine that all parts are in perfect mechanical condition and are giving maximum satisfaction.

A DAY AT THE CLINIC

Here is a Typical Day in the Life of Miss Reinette Lamothe Registered Nurse and Technician at the Biddeford Clinic

 Registered curse Miss Lamothe class at 6 A.M. each day to be at her detics at 7, the came at all other employees on the first shift. Follow these pickers to see what the does during the day.

The Smit of her many daily dates it to sit down with the plant physician, Dr. Clarance Thompson, and check over the previous day's records and outline the work for the coming day.

3. The Kahn blood leaf excertains whether the blood in regative a positive for apphile, a deficate test requiring great training.

Testing the usine for sugar albumin, etc. If verything abnormal found it is reported to the doctor is charge and he follows birough a more thorough examination of the patient.

5. A microscopic exemination to determine the emount of red white corporates in the blood. The normal red call count in the exemption is between 4½ and 5 million.

 Determining and recording the blood pressure of an employee, it saything annual is found the employee is advised to see his own doctor.

9. New employees give their name, ago, address, previous illnesses, etc., see a complete medical record is kept of each parson.

i. Here talks Lametha socials a policer's arm in an arm both, a recepfield specially designed to keep the heating polytion at a constant supportations for tome language of line.

10. Right in lice with many other large industries, all new employees at Pepperell are required to have a Kaha, or blood last for symbile. Of course, only a very small amount of blood is required.

I this ampleyes but his arm and has referred for a change of drags as Asy ampleyes who secular an injury should report to the Clinic Case. Failure to do so may result in a cerious injection.

11. Your name is shown lowning the plant editor an ordinary, bury day. Tited? Sure, but not too fired to attend a meeting of the Red Gray Motor Corps Dait for Civilian Debases!

NEW FRONT
AT THE SHEET COUNTER

When you must buy sheets, indison Lady Popperell Sheets—lighttentured, silky-more lady Popperell Perestes, or those arondy, pent-dayest-courses, Lady Popperell Survices Weight mustim. A Popperell Buy-Guide comes with each three and tells you exactly what you're getting for your maner.

But even more prosection than seted service faces is the guarantee of the same PEPPERELL — 1 great name on great labrics amore 1844.

Most some have an adequate supply of Lady Pepperells for the needs of the average hume. But of you can't sawars get the exact size you want — don't blame the store they're doing the best they can under war conditions.

> NEW FRONTERS ATTENTION!

FREE: another way to cut-down wants and make your sheet money go a long way is to send for the new Popperell Sheet Guide — a 52-page, profusely illustrated booklet with hundreds of facts on making absents last longer. Free, of course, Strong prendy our name and address on a postcord to the

PEPPERELL Manufacturing Company 100 State Street, Boston, Mass.

I'M OPENING UP A

New Front

... WANT TO JOIN ME?

MY NEW FRONT is right here at home. It's a Front against bit-or-miss buying.

You waste money buying "anything will do" or something "just as good." You waste money buying too cheaply, for cheap things wear out and need teplacing. And you can't do a very good job of was-winning with waste in any form.

New Pront! I say again — it's the Front against hit-or-min buying. We women alone can crack it. When it's time to buy, when you must buy — buy wisely, buy for the duration.

Lady PEPPERELL

Sheets and Blankets

Million of parts of Popperall Fabrics are as the storm of our armed form on every fightest, total

Espical of Papparatio present advertising is this full page message which will appear in the November issue of Good Househaping magazine

ADVERTISING IN-SURES CONTINUED SUCCESS OF COM-PANY OPERATIONS

OUR JOBS DEPEND ON CONSUMER ACCEPTANCE OF THIS LABEL, AND CONTINUED ADVERTISING KEEPS THE PUBLIC SOLD ON ITS VALUE

Great will is one of the most precious assets any company can have because it means that the buying public turns and accepts the high value of the product. It has taken many years and a lor of money to build the

The stirring black and white People of advertisement was teen by overto 000,000 west-construct readers of the August 3, Life magazine.

8.500,000 readers of the October McGall's will see this Pepperall nessense with its many helpful points for conservation of fabrics.

Peppa cell label into a symbol of leadership in the cotton industry and we don't want to lose that identity during this period when customers can't always get Pepperell marked goods when they ask for them. Our identity in the market stands between success and failure of our company and it assures employees of steady employment.

Insurance for Goodwill

Loday's advertising is insurance toward future good will of the company. It's one surestire method of making sure that all Pepperell employees will keep their jobs after this near has been won—a method of keeping the lamous Pepperell mane before the somet of America during these critical times.

During the last war many large and sucressful firms had the idea that because they didn't have any of their product to sell, they could save money by not advertising. History has proved then they were "penny wise and peaned foolish." After the war these componies found that their old customers had togetten all about them and that their competitors, those who had the foresight to maintain their advertising, were getting all the business. Many of the numadvertisers were buried out of business and many others found that they had dropped from first place in their industry to the cod of the limb.

Helps Conservation Effort

We don't warn that to happen to Popps rell and we re not going to give it a chance to happen. Although Popperell merchandise is getting increasingly difficult to obtain over the retail counter, we're keeping our standard on cost page; Valuable and famous name before the buyers of America by frequent full-page advertisements in leading national magazines.

Of course, today's advertising is not designed to self our goods, because a good part of our production is concentrated on fabries that will be used by the lons in the Army, the Navy, the Marines and the various other services. Our advertising is doing a different job non-lik keeping the Pepperell name in facet of the consumers by showing them why Pepperell Fabries are scare, and it's helping the government by showing these nomen hose they can conserve their existing fabries to get the maximum weap out of them.

Insurance for Employment

Thus, when the war is over, we'll be able to fill these people's wants and they in man will look for the People ell mademark when they go shopping for sheets, pillou cases, blankets and the many other products which we make. We'll be able to maintain our standing in the industry and keep our machines teorning at full blast. And what's more important, we'll be able to keep on the many thousands of loval People ell employees who are doing their part now, both in the mills and in the services.

Several of the latest Pepperell advertisements are reproduced on this and the preceding pages look them over —they represent your company and they are seen by millions of consumers each mouth—consumers tello will some day be able to buy all the Pepperell Fabrics they want. This is your insurance for continued employment after the war is over.

The September 21 into of Life carried this dramatic Popperal page in full-color to its many millions of interested readers.

WORLD WAR VETERAN HELPS BUILD MORALE

John Gerest of the full River mill is reading one of the new V-letter which he received from Aims Pagula who is "down under".

John Joseph Genest, loomliker in the Rayon Division at the Fall River mill is setting a fine example for his fellow workers to follow an aiding the war effort. Not only is he tatilizing the Paytoff Deduction Plan to pin chase his share of War Bonds, but he is materially helpand to build morale among Fall River employees now in the Services, by writing to many of them at drequent intervals.

John started his letter writing campaogn quite some time ago and today is corresponding regularly with over 20 different fellows. A veteran of the last World Vos he knows from first-band experience just what a few friendly words from home can mean to a boy in cacap of abroad. He knows that a letter from home can change a discouraged soldier into one that is full of fight and spirit, and from answers he has received he knows that his letters are accomplishing this end. Incidentally, John was one of the first to receive the new V-letter from one of his correspondents overseas. He is shown reading the letter in the pictore above.

Born in Canada, John came to the United States at all early age and later enlisted in the American Army of October 9, 1917, just 25 years ago. He served three months in training camps in this country and was their sent to France, where he saw across service until the was test so year, ten assaults later. For the next eleven months John stayed with the American Forces in France and was finally given an Homorable Discharge on October 9, 1918, just two years to the day from the time he enlisted.

John came to Pepperell on May 29, 1935 and since the time has enjoyed the combitence and friendship of his to-workers. He is married and has one son and middinghter

DYEING CLOTH AT LEWISTON

SCIENTIFIC DYEING OF CLOTH AT LEWISTON DYE HOUSE IS THE RESULT OF MANY YEARS OF PRACTICAL EXPERIENCE AND EXPERIMENTATION, UP-TODATE EQUIPMENT DOES A FINE JOB

Before roal far products were used and placed on the market. Grandmother doed many of the home formishings right in the kirchen. The method she employed was tery elever for she ventured into the fields and woods to pick betries, select herbs and peef the bark from trees to boil with water. Securing the shade desired, she always added common table salt before immersing the fabric into the solution for coloring. One couploise told us that his grandmother doed her white lace contains be beiling a heaping tablespoon of roller in 10 quarts of water to arbiteve an even shade, some women a remute and more ago picked goldenroal for a yellow shade, used too being, free bark for brown.

Modern Housewife Is Fortunate

Gratelineather was a pionoes deer, for she had little to work with, and deserves plenty of credit. Fortunately, the modern bousewife does not need to do her dyeing

This is the padding operation of dysing with the grey cloth being immersed in the dys and then equacipal between two padded rolls to remove second dys mathems. Marion Steat is operator of the machine which keppens to be dysing casted cloth at the rate of 110 yards to the minute or 10,800 yards energy hour.

This is a jig dyeing mechine operated by Archie Beland, the labels not through a bath of the cornectly colored dye, and is then really through reflect which squeeze the excess mobilizes from the cloth-

with betries, tea, herbs or bark for she relies on modern precise, technical skill and knowledge. Pepperell, at it Lencision plant, through many years of experience, to scientifically dyeing thousands of yards of labries daily to meet government and consumer requirements.

Practically All Cloth Bleached Before Dyeing

Basically, there are six types of dyeing. Direct and last confus are for commercial use; sulphur, discould and developed rolors are not suitable for sun fast his are wash or inb last; var and napoliol todors which as sun last. Nearly all cloth is bleached before dyeits is order to remove the natural tills and fais in rotton, the sizing used in weaving and any other impurity which may be present.

All labrics, except those to be dyed with sulphun colors and very heavy cloth, are boiled in the kiers under prosure with the fabric in tope form. The remainder "open bleached" or the cloth is kept at its full tosh. Heavy cloth and fabrics to be deed with sulphun color are open bleached for, if in rope form, they would she marks because these sulphur destults are sensitive abrasion or "rub marks".

Three Methods of Dyeing

Dyring of the cloth is done by three separate userless padding, jugging and contourness dvering. Padding in immerse the cloth in the doe solution and then squirthe cloth between two padder todds, which are of rubble to tenuor excess solution. Direct colors are general

issed. A good example is casket cloth, with thousands of bards dived daily. After it has been dyed, it is dried user cans, sent to the tentering frames, napped and again framed belong being inspected, rolled and packed.

ligs Used for Heavy Clath and Light Colors

Heavier shades and bright colors such as kelly green, for all blue and reds, black, etc., are jig deed. All types of colors; direct, basic, sulphur, out and napthol colors ton he jig dyed. A the jig is essentially a tub with a series of amoreised guide rolls so that the doth may be passed through the the liquor at full width. To pull the shift over these guide rolls and through the dye biquor are two driven rolls or "leanes" at the top of the dye into. The cloth is passed and repassed through this dye hiptor until the desired shade is achieved. Some flaunchs are napped before dveing, but, otherwise, the cloth is our drived, framed and given the finish the same as in Bulding.

Continuous Dyeing for Volume Work

Continuous dyering is very much as the name implies. The labele is dyed, reashed, oxidized, washed in one continuous operation on one machine. This is for volume bork where a common production figure is 30,000 yards to right hours. Greys, cans and nacy blue are the usual shades. Yar and napthol colors are generally applied to broadclorbs and other types of materials used on which has colors are desired.

Pepperell Herringhone for U. S. Army

M present there are bundleds of thousands of yards of Pepperell herringbone twell being dived O.D. (Olive brab) color at Lewiston for the U.S. Arms for cover-all surpasses. Var calors are being used, Government specifications rall for light and wash fastness, high breaking trength, etc. Some of this material is to be relative treated.

Aller the cloth has been dyed, it must be dried no it is passed over throwing drying care which are filled with low presents sham. The drift shown in this picture is sheel colored and will be used to like tended. Many thousands of yards are dyed daily.

Lean Thempson is those operating the Tentering Frame—a mechine which finishes up the diving job and which also holds the cloth out to its original width during the diving process.

a Water repellent process which was described in a previous issue of the Sheet.

A Few Other Uses

Many yards of flamuels are used in the silverware trade and must be "puse", that is, no chemicals are to remain in the fabric which might armish the silver. Towels are car dyed to insure even coloring, light and wash fastness. Some flamuels go into the shirt trade with developed reds or blues and are then overprinted in the priming department to secure the plaids. Peppetell was the first to place solid fast colored sheeting in volume on the market, not only for ordinary use but as a base for cambewick hedspreads.

The Foreman and His Assistants

Fred Huntress is foreman of the Dye House. A graduate of Rates College in the class of '28, he was employed afternoons in the laboratory at the Bleachery while pursuing his college course and after graduation he was employed two years at the faboratory. He was transferred to the Dye House where he received practical experience in operating the various machines. He was made foreman in 1980, the position which he now holds. With him are some very able assistants in the persons of Palmer Sadler, Larry Davidson, Emile Polletier and Herbert West.

"Watch the Birdie Please" — Says Harold Duston of Lewiston

WELL KNOWN FOR HIS ABILITY
WITH A CAMERA, HAROLD
ENJOYS TAKING PICTURES
OF HIS FRIENDS AND THEIR
CHILDREN

This photograph, taken by Harold Ductor, shows just a few of the photographs and paintings made by him is the pursuit of his hobby. Marold is a second hand in the Special Clotte Department at Lewiston, and appends most of his space time lating and developing artistic pictures.

Winter Drame Is the fittle of this combination print made by Marchi, and posed for by him. He took two expension regarded, and combined them to create the effect of a specimen and his drame. At the lath Davidon Att over his ficking equipment, and in the scene at the upper right is those his disam of excellent fishing to come.

Although his wife considers bersell a "dark room widow," Harold Dusion, 2nd Hand in the Special Challs Department at Lewiston gets a great deal of pleasure out of his spare time habby—photographs.

Does All His Own Work

Harold started taking pictures in earnest about eight years ago, two years after be came to nork at Pepperelland since that time less built up a fine reputation general his friends as an expert cameramon. Not content to merely snap the shatter, Harold does his own developing and printing, using equipment which he made himself-life feels that by doing this rootk himself he can be suffitted every detail of the negative is given the project afternion—attention that results in clear, sharp prints that repay him for his time and efforts.

Although Harold's car and dog are his most willing subjects, he also takes a great many pictures of his friends and their children, using any one of his several excellent cameras. Three or four years ago he wan several Haron able Mentions in contests sponsored by various camera magazines, a feat worthy of more than passing none because of the suff congention offered by the number and the versability of the entrants.

Hand-Colors Enlargements

In spite of the increased tempo of tear time living. Harold still finds time to pursue his hobby, although be has had to cut those somewhat on his honting and lishing. He was that the toost fan that he gets out of his causes work is to take an especially time picture, enlarge at and then color it by hand. You who have seen some of living that along these lines will agree that he does a swell job

In the past Harold has taken several pictures that buse appeared in the Pepperell Sheet and on this page you do see a couple of other evidences of his ability with the content.

OVER NEW DUTIES AT BIDDEFORD MILL

FORMER N. Y. OFFICE EMPLOYEE

the picture of Lyman Smith, taken in the New York office, shows him as the shally in-capable, affects and friendly.

Lyman Smith, who for the past nine years has been in charge of the Mill Department at Pepperell's New York office, has been transferred to the Biddeford plant in assist Manager David S. Cook.

Mr. Smith headed the Mill Department in New York, a department which provides close coordination between the sales and the manufacture of cloth at all the Mills and the bleaching and during of the fabrics at the Bleachery. His duties brought him many times so the lightered plant and for this reason he became well sequainted with many of the people here. Before going to the New York office, he was employed for a year at the Fall River plant.

Dyed-in-the-Wool New Englander

Mr Smith was born in Marblehead, Massachuseus, stiended the schools there and was guiduated from Harbing College, in the class of 32, with a B-S degree. The hill-hwing year be arrended Harvard Business school.

Officials and friends at the Bubbeford plant were aleasted to know that he had accepted the position; and lines that he will be as happy working with them as they are no have him. The Sheet, in behalf of all employees, takes this opportunity to recknow him and him all success in his new duties. He is married and has pure son, Charlton, who is four years of age.

GEORGE FLYNN, MEMBER OF TEXTILE FAMILY

FALL RIVER EMPLOYEE
FOLLOWS FAMILY TRADITION

George T. Flynn is a second hand in the slashing, warping and winding departments at the Fall River mill. George, adhering to family traditions, is now closely following the lootsteps of his course, George D. Flynn, Jr., well known throughout New England, as a Textile Machinery Dealer. Our George is very much interested in other branches of Textiles such as the repairing of machines and supervising first preparations of Rayon the Cotton System."

When the above picture was taken he was pitting the buishing touches in reassembling a Whitin's Schweiter Automatic Quiller, which he had just taken apart. George who has been in the employ of Pepperell Manufacturing Company since April 1937, claims he likes his work very much and proves it by always taking his ups and downs with a smale.

25,140 PERSONS KILLED SENCE PEARS, HARBOR—No, that's not the number of solders, soilers or mariner who have fact their death heroscally on the field of action—it's the number of industrial confere who have died at a result of careformers in their daily jobs—workers who are needed to equip our armed forces, with the supplies they need sight new.

Of course, not all industrial accidents retails in deaths. Since Pearl Harbor over 5,000,000 was workers have been laid up for various longths of time because of injuries they sustained from carelete accidents. This means a total of ever 257,000,000 man-days of production have been languaged to be made up. This last time represents a tanal of \$2,100,000,000 in economic lass—lyes, than's two billion, three hundred million dellact!)—and as a state when every second and average dellact counts reward our battle for free living and a (hance to work as the jobs we would to work at.

Accidents soday are unpartitied livery accord away from our jobs is a gife to littler and his crosses—a gife that we was sever hope to section. Stayler there is something in your department that at a potential "accident maker." If our report it immediately to your overteer and see that he has a found 14's not "sing" to be correlatively petriodic!

HERE'S WHAT THE BOYS ARE WRITING

What are you writing them?

WRITE HIM TODAY!

大 市 大

Samewhere - either in this country or abroad - a Pepperell fighting man is walking away from "mail call?" empty landed, just beenuse you haven't "lead time" to write him a letter. Naturally we're all busies these days, but let's take a minute or two to cheer our friends in the Services, Let's show them that we appreciare what they're doing for us. Write tonight -- write lomorrow - write often!

Balan When the photograph matterpard, Pet Jesigh Dubs of the Eddelard mill may stationed at Fort Ord California.

You asquired about the work I am doing here at Biggs Field and to I will attempt to gave you some idea of a sanitary inspector's

Capi. Williams is the Officer in theres. and he and I make a general inspection every morning. This includes the barracks and other living quarters, their conicary areas, the secon halls that are in mer and the restaus. cant and Post Enthange which are located in the main hanger for the contrainer of crerpane. You can readily see why a campmust be clean and in top-top shape. An epidemic would be a calemity at any tase of our Army Posts.

Another june or important duty in the meat and food inspection. Every posts of ment and every fresh toppishic or frest must be checked and stimped for Army careful and get nothing hus very light geade merchandire.

Well, ibn will gire you a rough idea what a sanuary inspector must do each day. The work it interesting and thus days quickly pass -to weeks. I want to say bello to everyone and with these the best of luck.

Yours very truly, 5mt. O. St. Jean

A hind word of chualts for being as nice as you people have been so me, and I suppose eshers, and I do want you to know that I approcesses what you're doing in more than one respect. Unless some of you have been in the service before, you can't possibly fully realise what it means when we simply dear from you. That does make us realize that we're not just a "paming shaught" bur somewhat of close friendship. As ever.

Corp. Leo Larrivee

Above Mc. Ement Collect of the Biddelo's will would like to hear from all his friends bad in the mill. How about abopping him a fire

While perusing through this July inch. I couldn't help but agree 100% with the logs in the market in the matter of receive my letters. Yes, especially now, the bert in camp here just seem to five from day to day at the hope of receiving mad. Being at An eveness seemen, "mail calls" are far apare, and when shore is "mail unit" leterid received aren't pleatiful enough. So if

Pepperell Employees in the Armed Forces write interesting letters. Read these excerpts from some we've received—then act!

* * * * *

Note of the people back at the plant would fit down in their spare time. I moure you that it would be greatly appreciated.

Your crule.

Pro. Joseph R. LePage

Dear Ster

Thanks to you and the Popperoll concern for the house I received some religious in the Armed Forces. It came at a swell time, at I had been scudying the different estimated tower and places of interest in Ministeps and vacinity that I desired to see before baying the South, and I think I furthered to adulation quate a bit in the above time alleged ma.

My enterior into the Army Air Corps was entered by obtaining a high mark in remodificance test at Fort Derron which qualified me for numerous branches of the servtes, as I chose this own. I am out eligible to by, have I'm listed as a "mechanic on the ling," as they call it.

Most of the flying numbers here now are R.A.II. have brought over hore from lingland and they have hundrests of American places of asfery in Europe for them to train so linels from Jove them a break. They are fee fellows to talk with and soll some tractic will worsh lineauing so. A British louis took too up flying with him in a formation and kind of lefs me with my mouth again at lad never here up before and sover to pure to you up under such aircumstances.

Yours "Very Princially, Tem Salter

Dear Ser

I are now stationed at Lowey Field, Cololada, where I recently started Photography School. Before that I was in Miant Beach, Burida, seven weeks.

The people over here are very arciable. All we have to do on Saturday and Sanday is report to the Service Mea's Club in

Adam Sgk Burnard Donawan, from the effice of the Lewiston plant where he was employed in the going to Officers' Training School. Denver, and we are shown the mouseairs and all over the city of Denver. After their tunes to lunch and lots of times we are honored by a dance. This is all better than I superced in the Army.

Per, Bererang C. Bureau

Dear Sir:

It is hard to realize that the world is an usuall, we all feel right at heint here, "down under," The people are all very rate to us, and of course the English language helpt a lot. The meany problem was really a past at the first, but have we are getting used to people, shillings, durings and pounds.

The very first day here I may several people from the States whom I know real well and it was a very welcome right.

I will be very glad to bear from you when you have the time. I will hope to be back to Authorn and Loweston when this store. It's going to take a fac to keep me away.

Carp. Paul T. Whitten

ROLAND VAHILANDOURT

Reland Vaillancoure, who was employed in the clerical force of the Blanker Division or Buddeford, has been in England mace four and reports that the country and buildings are beautiful and that the "gosple here aren't affeit to their at the place. I am only these make from nave."

Because he is far from home, he writes that he is very longuage and mines his freedy at Pepperell very much. Why set write him tought and give him a word of chees? His address in

Cpl. T. Rahad Vaillanouert 51945234 Co. B. 609th Eng. So. (Ave.) A P O 875

e n Pestimascer, New York Dicy

His friends will also be interested in learning that he was promoted to Corporal on July 1st, and that he is now Second Cook, dishing up the grab for the officers.

Above, Plc. Herrey Pageau is above templey his lips in practice for "secolity." His friends at Biddeford miss him and with him luck,

Dean Sir:

It isn't every concern that'll give these farmer employees any due consideration. Pepperell hat always used one the best, and a couldn't find any possible reason to complain. Why should I? Nine bears ago we had the depression—no labs as aght, things tosted glossoy. The week before the N.R.A. I was starting my first day of employment. Some these, for nine years, I empayed steady employment whether it was satisfy the mill or outside working in the yord.

In conclusion, I hope that as soon as the war is ever I would certainly like to manall over again in your employ. Again I'll say thanks for everything.

Your farmer shear room employee, Pet, Harry Pagette

WHAT'S DOING ON HALLOWE'EN?

A rostume party such as this one, perhaps. The girls use the only ones who dress in costume; the usen get the Ballowe'en touch with masks and paper hats. The party is tumplete with skeletons, horns and ghost stories. And for tefreshmens there are doughouse and cides, pumpkin pie and coffee.

Why not plan a party at your house? He sure to include some soldier and sailor guests. Invite as big a crowd as your house will hold and make it a jolly time.

Serve some homenade doughnuts. They're sure to make I hit, especially with the boys in service who seldom get home cooking-

SWEET MILK DOUGHNETS

312 to benjos all-purpose fant. 2 rapps

4 temspoons having powder 1 cup sugar

i legapeon and

2 tablespoons melted shorrening

le leaspoon cinquation I tup sweet milk

to Semi-poon number

Not 314 cups of the floor with baking powder, salt, classitions and turner. Brat eggs with ourse until lights add melted shortening for in the floor maxime alternately with the milk; it necessary add berg four so handle easily. Tuen case a lightly Board board and bil in 15 auch in thickness. Cut with a floored doughout cutter.

bather the escape and repeat until all dough is used. Slip the disabilities (atchally into a keeple of smoking box fat. Test the fat by slipping a cube of day old bread into it. If it browns to seat; trough, the fat is hot enough.

Look 4 to 6 doughnuts at a time. When they come to the surface, We them aget so that they will rook ment, until golden become both sides. Because fann fat and drain on brown paper. Makes la gra dozen.

von Milk Braghnots: One baking powder and sweet milk. Sur begapose seda into I rup wair milk and perceed as before.

Some Cream Boughnuts: Use some recom in place of some will and Smil the meltral absertating.

GAMES FOR GAIETY

No Hallowe'en Party is complete without games. Here are four good ones to try on cour gang, along with the usual bubbling for apples.

PEANUTS AND A MIRROR

Ask one person chosen from the crowd in hesearch. On a chair at his side place a low? of un-holled peanurs. Give him a tablespoon and a hand mirror I had lack of the sented plaser place a second person. This person holds an empty quart milk builde on top of the compatingly lead.

The object of the came as to see how many prunits the contestant ran steep up in the tablespain and then, by looking in the mirror be holde, put them into the milk leitele. Fuch player has three chapters.

When everyone has tried it, compare the sortes. The person genting the most permits into the milk buttle wins the price.

A BING RELAY

Line op the players in two tows farmer each other. Everyone keeps his hands behind his back and holds a tosthotek in his mouth. When the game starts, you ship hoper rings on the tombpicks of the contestants at the head of each line. The range must travel the length of the lines, passing from touthpirk to touthpirk, If a ring drops unthe floor, it must start again. Take that gets ring to the end person-

THE ARTIST GAME

This is fun. Give each guest a sheet of paper and a pencil. Put out the lights and normal ruch person in draw a losser two indies high, placing a dear an droot, a wind a on card side, and then adding a chimney, a si lexally und a tree in the garden.

When the lights are turned on there will be much laughter. Someof the drawings tour show the chinney on top of the tree, the ablewalk above the liquer and other equally featur combinations. Here two small prices reach; one for the most correct drawing, the other for the femalest.

SPIRIT MESSAGES

Brite factures in lensus pace on white tands. You may keep the per-enalizies of your guests in mind, but he sure that the forcum is good instituted.

Guests hold the cards over lighted cambles, and the spirit messages bjorski.

soft dry togredients together. Combare eggs, milk, and melted fat, and add this maxime to the dry ingredients, stirring in the malanestast. Bake in a well-greased, shallow jun in a meshape oven (354) drg. F. for 30-20 minutes, or in smaller juns in a hot oven (354) drg. F. for 20-25 minutes.

Where the entage fairs and rind are used instead of the spices and milk, and estange rind with the liquids tathet than the day ingredients.

TACK UP THESE HINTS ON YOUR RITCHEN WALL

If your family describ like spinnels, flavor it with a lorder cotton. This will get that bentifield vegetable base them and make con like it.

Add a little strong today to your Saturday sught baked brane, while they're heating. And only good, but something the result.

Be patricin and veve fresh eggs. Carany and has padstrambles, they're delicents. Add a few reaspoons of devided ham just before thry're dam.

Fat chicken often and help bade Nam. In this way you'll save beef and other mosts organity needed to our soldiers and sailors.

Keep the some drained from contest or cannot vegetables elabhage, corrects, pear and others put it in a glass par, trabitly covered, the I is an the retrigerator, then mix one part to the paths tomato juice. Add apply a people of whatever sense in your family likes and refer it as a beverage. Rehald it will make a glassful ad ritumans and help make crapyone leel like a ancient blass?

CREAMY BAKED CUSTARD, TOO

is a defections despett and easy to make. And it's good for the family (think of the milk!) This recipe serves six and calls for only 1/1 cap of sugar.

3 eggs hi cup segar a braspion calc 3 mps scalded milk 2, ten-poon vanilla lew grams numeg

Bent rege slightly, sold sogue and salt, and sleedy pour on scalded cast. Add rate in. Pour into custord cups. Speinkle few graft' natures to sop of each sam. Hat's in a moderate oven 1250 deg. E. on a rack in a pan of water, until the custored are set. To test, polithe pount of a thin knife into a custoid, if it comes out gloss, the custods are done and should be removed at once from the hall safer to keep them from cooking the march.

During taking, he sure the water in the pan does not book. If it does maked will when,

HERE'S THE RIGHT WAY TO BROIL A CHICKEN

First of all, lower the joints that rang enting). Count the chicken with method fat and quinkle with salt and prepar-Start besiding with the skin side of the hird away from the best-

Turn the chicken several times as it browns, these it frequently with pun drippings,

A 2-pound bird will cook in 35 to 45 minutes in a moderate ore? Serve on a hot platter. Place pieces of past from which the crush have been cut, around the edge of the platter. Have a dish of turnant july no the table. It poes well with chicken.

Buttered rire and a green salad po well pay.

GRAPE TARTS

WHAT ARE YOU DOING TO HELP WIN THE WAR?

YOU CAN CONSERVE RUBBER

—if you have an automobile, combine with the neighbors in going shopping. Call it group-riding. Don't take two-or three separate cars when you can all go in one. Remember there is no soore rubber to replace more out tires. Any new rubber that is manufactured will go to the Armed forces. And your car will have to go without when your passent tires are gone. Don't speed—Don't stop and start-outdenly.

YOU CAN KNIT FOR THE FIGHTING MEN

-- flyers need all kinds of knitted garments. And every pair of feet in the army could do with a pair of woolen socks. Knotters are needed badly. Ask your local Red Cross office for information about your for knitting.

YOU CAN CROCHET FOR A FIGHTING MAN

—Crochetieg, believe it or out, has its place in the war. Men on mine sweepers want those large unitiess crocheted from fishermen's string, lined with beavy wouldn continuerial.

BUDGET NEWS TO BANISH BUDGET BLUES

- * Serve DRUED BEANS frequently in various ways—baked, in croquettes, soups or salads.
- * Fill your merous with the fruits and regetables in season. For October there are apples, cranberries, grapes and pears; and any number of good regetables.
- * For low-cost, one-did: meals, combine macaroni products with cheese, meat, nuts, eggs or milk.
- # Use more cheese.
- * Stretch the meat dish with notalles, domplings, bread crambs and stuffings.
- * Serve spicy terms to rauce. It's healthful and lasty.

Besides doing your last on your job, are you doing other things to help America win the wor? Men and somen in England who mark in war plants from it in the contribution if at night our still find "spate" time to do outside workfor the nor effort. They're "all out" to do whatever they can. They not as air raid spotters, or mark at contreme one number of helpful things. HOW ABOUT YOU.

Here are some ways in which you can help;

YOU CAN SAVE SCRAP RUBBER AND METAL

- every lift you can spare will help war machines. Collectual hathing cage, but water buttles and tin cans (washed and fluttened) and give them to the local salvage committee.

YOU CAN SAYE HOUSEHOLD FATS AND GREASES

—dun't throw away a single drop. After you have all the cooking good from them, pour them into a wide-mouthed metal can. Keep it in a cool place. When you have a pound, take the fats to your market man. He will pay you for there and then start them on their way to the war industries where they'll be turned into glycerine for gams.

You can buy enrolally—Watch ceiling process Cook with less sugar—Take care of the things you already own—Suct money for taxes—BUY WAR STAMPS AND BONDS REGULARLY.

YOU IN THE YOUNG CROWD

Have you noticed new families in your neighborhood? New workers who have come in to take jobs at the mill or blenchery? If you have,

make friends with them. Take them into your crowd, your bouding or dancing club, invite them to your home for a pap corn party. Show them ground,

You can make this part of your nor work—to look out for the new youngspeople in town.

If you or your father or brother are good at corporat? form a class and teach others how to do home repairs. Household articles must be made to last these days.

Girls can form clubs where they can knot for service men; or swop ideas on recipes; how to make clother lied or help each other remodel dresses to make them had like new.

SWEATERS ARE WONDERFUL-REEP THEM THAT WAY

Always put a sweater on carefully, so you won't strain it, or stretch it out of shape . . . Dur't needland your security pockets or thry will sag and look bushes . . . Put sweater away folded in a drawer, herer on hangers.

As for working . . remember to much a scenar greatly is labsizin water with mild soap ends. . . . Re-ware all the soap is alterraphly disardred before you put the scenary in the water . . . Squerzee sods and rime water through the scenary . . . don't wring or take it. . . . Rime mind all the sods are pone.

To dry it, for it between two both tooch and put it to take our threes water, . . . Special it on paper of cloth on a flat surface to Gy, . . . Pull it gently into shape and stick pins appeals into the terment so that it dries in shape.

If you want in make sure of getting a sweater look to its right shale, measure it before you wash it, or draw an outline on paper.

Then stretch the sweater back to the autline or measurements after you work it.

BASIC DRESS FOR WORK OR SCHOOL

Fasy to cut, easy to put torection and cusy to are is this thesis type dress. There are to complicated pieces. Didberest Econsories can be were with it. The white colles can be detached easily and the neck were open or thesed. Looks equally well in a size 12 or size 20. To it is a willower brown and white checked spin mann till ton and dike this Simplicite actions, send 25 cents along with your name, address and lar, to things to the Ludies. The Popperell Mfg. Co. 150 Sair St. Buston, Mass. 1

LABY, TAKE CARE-

- *—of washable dresses. Don't ever leave them in damp heaps. Press with a moderate iron. Use lake-water nater for colored entrops and rayons. Soaking mer long periods, stretching and excessive heat hart tayon fabrics.
- *-of rayon stuckings. Hon't sook, or stretch or dry them where it is too hot. Let them dry 48 hours.
- *—of shoes. Keep them in shape with shoe trees, Protect them from sculling and damp weather. Have them repaired as soon as they need it. Dan't mear tun down shoes to work. Keep soles in good condition. This will be better for your feet and keep son from getting fixed.
- \$-of uylon or old silk stockings. Don't throw there away, when they get rates in them. Have them repaired

A RIG PELLER'S SUIT FOR A LUTTLE PELLER!

This putcintie hittle buy je helping his family collect serup juger and too care, and he's very proud of his new putfit known as "The Commando" suit. It's made of pop-Jin, treated with "Zelan" which means that is will thed mater and resist consoils spale and stains. The sult has a sign. pender overall and a By-hut. ton front jucken. Berause of the finish on the lateir, is wall star clean longer and need less subbing, and that, ed maire, mains longer wear.

(For information on the price and where this self may be purchased write Lanes to the Ladies, The Pepperell Mfg. Lo., 160 State St., Boston, May,)

BE YOUR OWN REPAIR MAN

You have to do your own repair jobs at bome now, while so many man are away.

Wast to mend some broken thing or place? Such jobs are important in good household management these days. Use household rement on broken dishes. It's transportent, flexible and waterproof and will stay on through rountless washings.

Tri Duco coment. It cames in a handy tuler, is easy to apply, quarkoliying and makes papers that allow scannely a right of a break. First it, too, on loose chair rungs, took laggage, smiled alicen, noted connections, broken eye place rine, toys, and other repair jule. Foull find that it's sold in sunloners, drug, hardware and clasin stores and automobile shaps in your city.

HOW SMART ARE YOU?

Are you looking over last year's wardrobe and considering the many things you can do to make an old dress look like new?

Here are some mod hitte:

—if you're were and were your fall suit and can't see wearing it in its persons state again this senson, take the jucket and can't up and make a tachen of sung-fitting hat out of it. It will match your out skirt and you'll feel yourself into believing you have a new casemble. You might have enough material [set our; to make a small peakethook, too.

take a favorite accenter that has stretched out or the neek and cutts and band it wish him pieces from your trevel akin or jacket.

controlled flowers on a sweater that seems to have a few too muon tiny much hales. The Brocess will more up a multitude of delects and the sweater will look like own.

equal size squares; sen them together and make a any coloredbuliet to go with your soil or toder a cardigate sweater.

-then of course, there's the tried and true method of dressing up an old dress by getting some new accessories. A collar and cuff set; a new both and a matching flower for the neek; a new clip or gudget on the lapti. All are good.

Richardik: Dut Mercer.

Elementh I relate for all to see The brief suturnary of a biography, It was founded in January minercen-chirty. By characters of real integraty. Our beroine was a frail litele angl, Since then she has attained a stabile goal. I mean, of murre, in the work she did, That's Ethel, our own little "Crisco Kid". Then came Catherlee, as torent a bride, So proud of her Jimmy by her side. And Sailly, the same through all the years. Still sleeping thru movies, mid laughter and stors. Sudate and quart in a sociable way. That's always Anne F. day after day. With her comes Drlin, so easy to please Then in blew Gladys on a fresh Musch Incom. Next to grate our society mank, Was Bella, Judia with her little black book. And Mabet with her matter of fiel way, And Genevirer never stuck for something to say, I hen came the year of thirty awo. flot B. heads the list of that popular cace. Annie C. is remembered for her famous diets, That they didn't last, she won't slimy it. Minute's the next of the famed presenders, Tis soup, she claims, that keeps her alender Then name Mae, mild intamered supreme, And followed shortly by quiet Kathleen. And everything was peaceful, secure and calm. Then rushy in May, in thirty-seven. Amy disrapted our blue beaven. Laily Macheth with her haughty way Wasn't for long, 'cause the's now plain Kay.

And Amag with her nurse's training. l'seferred us to her pattents' complaining. Every summ needs a giggle or two, That's when Gersie came into view Then Laura came in around speed, And Hilds the forty one queca leads. Of Very I've just one thing to say, She's as bright and cheerful as a summer day, Albertina and Helm came in quick pattersion. Then Mangaret and Ada Joined in the procession. Now there's only Clara and then Filten. guest that within the slate quite clean. Except for the hose who with my work, There's Arthur and Joe and Walliam Banke. And also our Jack who's always kissin', And Louis and John and Charles Austin, Then there's Benjie and Johnny and Stanley And that's the whole of the Manutek family. Last but not least there's our base Mr. Horne. Who'd he at a low, had we not all been born. Now that is the history of Chith Room "R" Don't you agree we have quite a beography? Now don't you think we singlifu Have a few lines about our Reported. She joined un here in 35, lanuary, the tenth or eleven. quies unobtrucive Miss Who'd ever think she'd change like this. In case you don't know who I mean, sir, Her name is Doroches Merris.

Just before this issue of the Pepperell Sheet went to press, the following letter was received from one of our Fall River employees now serving in Uncle Sam's Navy. We are refrinting it here because we think that you will be interested in seeing how one of our own fighting men feels about the war and things in general.

Dear Sir:

I got the Pepperell Sheet about a week ago. The lirst thing I naturally looked for was the Roum-Note news section. Let me tell you a few things. It cortainly cheered me a bit, the humor and serious side of the home news came as a constant reminder of the good folks I left behind me when I came into this man's Navy. Thank you for the Sheet and may I hope it committees to come wherever I am.

School keeps me very busy both at day and night, (During the day—classes. At night, bookworms.) Although it's not very long since I graduated from High School, I never dreamed I'd get to the place where I'd have to attend school again. But this Navy, of which we're all proud and confident, is making sure that its personnel is a trained and specialized group of fighting men. I'm sure I'm not going to let the Navy down by being a slacker. I hope, tou, that thuse workers who "lorsen up" on their job ought to be made to realize the seriousness of slackers,

Uncle Sam has taken the initiative in some areas. Me, all of us, must get behind him and keep bint rolling forward until these barbarous villains are done away with.

It's good to hear of such events as those taking place in the Solomons and those taken place at Dieppe. It shows that the United Nations have made plans — effective plans — to meet the enemy, engage him in battle on equal terms and watch them surrender with all the cowardice and fright of a "stabber-in-the-back,"

American workmen must continue their aptrending production. American workmen must maintain their high spirit of cooperation. A happy worker is a fast worker.

I hate to hear of strikes and labor cumities between capital and labor. What would happen if we here in the Service were "on strike" because we didn't like the job we've got to do? We've had to sacrifice much more than a civilian can ever realize—social pleasures, higher paid jobs, luxuries, etc. I'm sure every soldier and saclor who wants to light for his country and cause is disheartened to hear of strike-bound defense plants holding up vital war majorials.

We appreciate Pepperell's donation to the war effort. By this I mean, good workmanship and speedy production in making those woven items which we service men need.

We appreciate to know that everyone is buying 10% or more of their wages in Defense Bonds and Stamps. We say, "You do your job and we'll do ours-and the job will be done in short order."

I expect to be here for several months more. If I get a leave after that I'll be sure to drop in and see the gang.

Please keep sending the Sheet and writing whenever possible.

Sincerely,

GHARRY R. PERRY, A.S. U.S.N.A.T.S. (Diesel) Richmond, Virginia

"FIRE IS THE BEST OF SERVANTS-BUT WHAT A MASTER!"

Fire the Segvant

Every day, every one of us uses the servant Fire to help us in our daily tasks and comforts. When we light the stowe in the morning we strike a match to start it — those of us who smoke ignite our pipes, cigars or cigarettes with helpful flame — and when we go on a camping trip, matches are one of the most important pieces of equipment in our packs, for without them we could not keep worm or satisfactorily fed. This ordinary, everyday use of matches and other combustibles to aid us in maintaining our homey comforts as a wonderful thing — it is an excellent example of Controlled Fire—the Servant?

Fire the Master

But—uncontrolled fire—the Master—is vastly different. It can destroy buildings in a matter of numutes, and it can cause tragic suffering and loss of life for chose caught in its toils. No insurance can sepay the Nation for the losses of time and irreplaceable materials resulting from Fire! Even a small fire in a cottage helps the enemy as much as if the cottage had been bombed because repair or schuilding reduces the Nation's stock-pile of essential materials—and it is accomplished at no cost to the Axis! Do your part to guard against such losses. Reep Fire the Servant—dun't let it become the Master!

FIRE PREVENTION WEEK - OCTOBER 4-10
